

Knowledge-base sample

Entirely fictional. Case snapshot: August 31, 2026. Synthetic organizational evidence for a hackathon prototype.

KB-01 | Account access and invitations

Source: DocNest. Last reviewed: 2026-07-15. Owner: Support Operations. Scope: All current products.

Verify requester identity and admin authority. Resend expired invitations from the tenant console. Never send passwords or reset tokens in ticket notes. Deletion requests go through Security; this page does not authorize deletion.

KB-02 | Invoices and seat proration

Source: DocNest. Last reviewed: 2026-06-18. Owner: Revenue Operations. Scope: All subscription tiers.

Use the authorized billing contact. Added seats are prorated from activation. Purchase-order changes require Finance approval. Disputed commercial terms go to the account manager. Support cannot promise credits.

KB-03 | Data connector retry queue

Source: DocNest. Last reviewed: 2025-10-09. Owner: Data Support. Scope: Data connectors, migrated tenants included.

If deliveries accumulate, check endpoint status and token scope. Set the retry interval to 60 seconds and observe the queue for 15 minutes. Collect adapter version and recent deployment details if the queue does not drain. Avoid repeated restarts.

Knowledge-base sample / 2

KB-04 | Historical replay checks

Source: DocNest. Last reviewed: 2025-11-13. Owner: Data Support. Scope: Data replay jobs. Check the job ID, destination acknowledgment and replay range. The standard deduplication window is 24 hours. Keep replay inside this window when possible; obtain specialist approval when duplicate delivery could affect production records.

KB-05 | Import connection checklist

Source: DocNest. Last reviewed: 2026-07-08. Owner: Data Support. Scope: Data 4.x. Check endpoint reachability, certificate validity and token scope. Imports use ISO date values and comma-separated UTF-8 samples. Ask the customer administrator to rotate credentials. Record the error category, never the credential itself.

KB-06 | Workflow calendars and timezones

Source: DocNest. Last reviewed: 2026-06-11. Owner: Flow Support. Scope: Flow 6.x. The tenant execution timezone controls deadlines; user preferences affect display. Check the local holiday calendar before modifying a rule. A calendar change should be tested on a copied workflow.

Knowledge-base sample / 3

KB-07 | Exporting operational records

Source: Acquired product portal. Last reviewed: 2025-08-14. Owner: Product Operations. Scope: Data enterprise tenants.

Open Admin > Jobs > Export. Choose a service account with export rights and confirm the data scope. Large jobs may remain queued until the tenant batch window. Attachments are exported separately from row data.

KB-08 | Completion events across products

Source: DocNest. Last reviewed: 2026-02-04. Owner: Flow Support. Scope: Flow to Data integration.

A workflow completion event is emitted when the final approval is recorded. Use the workflow ID to trace it in the Data delivery log. If no record appears, compare the execution timestamp and the destination acknowledgment before retrying.

KB-09 | Service reporting and preferences

Source: DocNest. Last reviewed: 2026-07-02. Owner: Service Support. Scope: Service 5.x.

Check whether archived cases are included and whether duplicate schedules exist. Language is a user preference. A transfer can appear in both queue histories, but should count once in a unique-ticket report. Report reproducible dashboard discrepancies to Engineering.

Knowledge-base sample / 4

KB-10 | Regional escalation rules

Source: DocNest. Last reviewed: 2026-03-19. Owner: Service Support. Scope: Service enterprise tenants.

New tenants inherit the organization-level escalation rule. Review the regional override and record any exceptions before changing scope. Confirm the expected behavior with the customer in a sandbox first.

KB-11 | Approval owners and templates

Source: DocNest. Last reviewed: 2026-06-24. Owner: Flow Support. Scope: Flow 6.x.

Only the customer workflow owner can nominate an approver or substitute. Duplicate a template before editing approval groups. Support may explain options but must not select a business approver for the customer.

KB-12 | Managed adapter quick checks

Source: Product operations space. Last reviewed: 2026-04-23. Owner: Integration Engineering. Scope: Managed adapter 3.2+ on Data 4.x.

Verify endpoint and token scope. On the managed adapter, use a 120-second retry interval; shorter intervals can preserve a throttled queue. The console path is Operations > Transfers > Export. A destination acknowledgment, rather than final approval alone, completes the delivery. Legacy adapters use their existing settings.

Knowledge-base sample / 5

KB-13 | Inviting a new account user

Source: Regional onboarding space. Last reviewed May 6, 2026. Owner: Regional Enablement. Scope: all current products. Verify the requester and administrator authority, then resend an expired invitation from the tenant console. Never include reset tokens in a ticket. Confirm the preferred interface language.

SN-01 | Replay window field note

Source: Product operations space, restricted to Data specialists. Updated July 9, 2026. Owner: Integration Engineering. For migrated tenants with replay-v2 enabled, the effective deduplication window is 8 hours. Confirm the flag and delivery history before approving a replay. This note is linked in specialist conversations.

SN-02 | Inherited rule behavior

Source: TeamLine specialist note, retained July 16, 2026. Owner: Service Technical Support. Some migrated Service tenants retain the regional escalation flag. A new tenant and a migrated tenant can therefore behave differently with the same displayed organization rule. Check the inherited flag before changing the rule.

Export scope

This is a convenience sample of 13 articles and 2 specialist notes from several repositories. Article titles, owner labels and dates are source metadata. It is not a complete catalog. The article text reflects the August snapshot, not necessarily the revision viewed on a historical ticket. Permissions shown here are fictional; the sample contains no customer secrets.
